ABSTRACT / 200 WORDS

CorpVidesh AI is a connected RegTech proof of concept for Indian corporate treasury teams evaluating overseas direct and portfolio investments. It brings company selection, investment purpose, destination currency, amount, market context, legal triage, document readiness and filing evidence into one traceable workflow. The application offers a 1,000-company demonstration catalogue, 52 financial hubs and 212 investment scenarios; sourced financial rows and illustrative entries remain distinguishable. Treasury choices follow the user across public desks, while authenticated corporate, regulator, GIFT and fund portals apply separate account, company and record-access boundaries. A corrective statutory agent graph retrieves and grades evidence, revises weak queries and checks advisory output; Copilot, document reading and currency outlooks use server-side execution. Public market observations retain source times and delay caveats. Three-dimensional clearance and breach models explain event progression without claiming real approvals, payment execution or certified cyber resilience. Append-only Cloud records, ordered review events, unique fund references and hash chains support inspectable demonstrations. Its distinctive proposition is the integration of Indian outbound-investment decision controls with accountable multi-party evidence, rather than an proven global first. Pilot impact should be measured through preparation time, evidence completeness, query cycles and task success. Official integrations, legal certification and production-scale assurance remain future gates.

THE FUNCTIONAL MECHANISM

01	02	03	04	05
SELECT	**ASSESS**	**CHECK**	**RECORD**	**REVIEW**
Company / hub / class / amount	Law / FX / headroom / tax	Category-aware documents	Local demo or secure Cloud	Role-scoped demo events

SIX LENSES. NOT SIX REQUIRED APPROVALS.

RBI · IFSCA · MoF · FIU-IND · DPIIT · CBDT. Automatic-route eligibility is reviewed through the designated bank; proposed supervisory lanes do not expand statutory powers.
